Parent Case Text**CROSS REFERENCE TO RELATED PATENT APPLICATIONS**

The present *divisional patent* application claims priority under 35 U.S.C. 121 to U.S. patent application Ser. No. 10/065,732, filed Nov. 13, 2002, now U.S. Pat. No. 6,754,913 B2.

Please replace paragraphs [0004], [0007], [0009], [0010], [0012] with the following amended paragraphs:

Summary of Invention

[0004] The present invention relates generally to toilets and, to a toilet sanitary cleansing means whereby the user can wash the genitals and posterior parts of the body after the use of the toilet by means of separate nozzles.

[0007] A further object of the present invention is to provide a toilet sanitary cleansing means which is able to wash at least one of the genitals or posterior portions of a user's body by selectively using a dedicated cleaning nozzle.

[0009] A further object of the present invention is to provide a toilet sanitary cleansing means that can be used to clean posterior parts of the body after toilet use without the use of toilet paper through use of a drying function. This which is functionality is of particular importance for boat toilets and other toilets, operating in environmentally sensitive areas where sanitary system cannot handle the processing of toilet paper.

[0010] A further object of the present invention is to provide a toilet sanitary cleansing means that has a self cleaning, disinfecting and deodorizing function for the nozzle itself. One method for achieving this object is by means of separate additive components.

[0012] A further objective of the present invention is to provide the means of maintaining completely clean and sanitary conditions for all users at all

times. One method of achieving this object is by means of replaceable nozzles, and deodorizing, cleaning and disinfecting additives.

Please replace paragraphs [0018], [0029] with the following amended paragraphs:

Detailed Description

[0018] This invention overcomes numerous disadvantages and problems found within the prior art. The prior art can be classified into complex and simple devices. While such complex devices are typically very expensive to manufacture and such simple devices are relatively inexpensive to manufacture, there is a general lack of market acceptance for any of those devices which indicates additional problems. None of those devices requires a set of process conditions within which to operate them. None requires a projected cleaning area 13 within which cleaning of the genitals and posterior parts of the body can take place. None of the devices can be economically installed into all types of toilets, including flush tank and pressurized flush type toilets. None provides a device that operates with a cleaning fluid composed of multiple ingredients other than water. One means of providing said ingredients is by means of replaceable cartridges. None provides an environmentally friendly paperless toilet for use on boat toilets and other toilets operating in environmentally sensitive areas where sanitary system cannot handle the processing of toilet paper. A drying function is incorporated into the apparatus to achieve the paperless process. None defines a sanitary cleaning process for the device itself, whereby commercially available disinfectant and deodorizer fluids 16 are an integral part of the cleaning process. The detailed description of the preferred embodiments will address the aforementioned limitations and describe the solutions provided by the invention.

[0029] Said cleaning fluid can consist of water only, water mixed with soap 17, water mixed with anti-bactericide 18, water mixed with anti-smelling agents 19 and any combination thereof. Those additives are added via injectors 20 in liquid form or slowly released into the cleaning water in solid form, or any other known method of adding water soluble components to said cleaning fluid. One means of providing said components is via replaceable cartridges.
